

# Yanmar Second Alternator Kits- Charge at 290+ amps

Kit prices start as low as \$399USD

Only at Yachtwork.com

Our new patented production process combined with the strong US dollar allows us to supply second alternator kits for a new LOW price!

Yanmar ranges from 20hp to 110hp.

Easy mounting of large frame alternators to the JH4 series Yanmar, or a single belt, 80 amp alternator to the YM20/30.

3/4JH4 Forward mount. Specifically for Catamarans or engines with limited forward space. This kit allows easy mounting of a 160 amp Delco or the Balmar 210 amp to fast charge big loads. **\$450USD**

3/4JH4 Reverse mount fits under stairs on boats such as the Beneteau, Jeanneau, and most other yachts with stairs over the engine. Allows easy mounting of the inexpensive Delco 160 amp or the Balmar 210 amp for a total of 290 amps of quick charge power.

**\$450USD**

JH4-TE/HTE/DTE Specifically made for catamarans. This extra beefy design is for the larger Yanmar engines. Our 6mm steel, laser cut, hydraulically bent, work horse can supply the needed amperage to just about any electrical need. Coupled to the Balmar 210 amp alternator we provide 290 amps of fast charge power. **\$450USD**

JH4-TE/HTE/DTE Reverse mounted kits for Beneteau, Jeanneau, and many other electrically high demand yachts. This kit has proven itself in the field with happy customers in Europe, Asia, the USA, Canada, and throughout the South Pacific. **\$450USD**

**Special offer-399USD** Mechanic's kit allows easy mounting of water-maker pumps, bilge pumps, generators; even jack shafts or specialty alternators into difficult locations.

Mechanics kit's come with-

- Our "Yachtclamp" that securely grabs the timing cover of the engine providing a secure steel structure to weld or bolt to. This is the heart of making for an easy installation.
- Aluminum double groove, half inch 120mm custom pulley to match existing front pulley.
- Special jacking tension arm to make simple belt adjustments.

Call about YM30 mechanic kits or JH3/2 kits

*Alternator sold separately*

YM20/30 Mechanic's kit-  
Use our YM20/30 kit to belt drive an alternator, water-maker/bilge pump, or other device. Simply install six bolts to secure the 6mm steel mount to the starboard engine side.

*This mount provides a secure system to begin the mounting process.*

Note-This kit comes with a double ½" drive pulley. Only one groove is used on the starboard side that splays the salt water pump. The second groove is used for mounting a second device on the port side of the YM20/30. **\$450USD**

Drive pulleys for the incredible low price of **\$140USD**

Our pulleys are made from light weight aluminum or extra durable cast iron. We have pulleys ready to ship for the 3JH4, 4JH4, 4JH4TE/THE/DTE, JH2 YM20/30 and many more. All pulleys are double ½" groove and match original pulley diameter.

Half inch belts are an inexpensive proven technology. They provide low side load, and match the original Yanmar supplied pulleys.

Because of the increased side load, difficulty in replacement and non-Yanmar style we don't recommend serpentine pulleys, but can provide them on request.

*Alternator sold separately*
